

The one easy solution for all the joys of hearing: **Motion™**.

LIVING

Siemens Motion.

All the joys of life. One easy solution.

BY SIEMENS

Keep active with Motion

Those who wear hearing instruments should be able to enjoy life to the fullest without having to think about their hearing impairment, no matter what they are doing, be it enjoying sport or leisure activities, having stimulating discussions or catching up with friends, spending a cozy evening in front of the television, having a long chat on the phone or taking a long walk in the woods. The new Motion™ from Siemens provides wearers with the pleasure of unrestricted hearing in all situations. For people who simply love life.

It's all talk and no wires with **Tek™**.

A hearing instrument for every situation

For many years Siemens has been considered an innovation leader in the area of modern hearing instruments. It should come as no surprise, then, that Motion's design incorporates everything that's technically possible today. Thanks to the latest BestSound Technology, its sound and directional hearing capabilities shine. It adjusts automatically to everyday hearing situations and connects wirelessly to cell phones, telephones, televisions, stereo systems or computers. It doesn't matter if you're at work or with your family, playing sports or taking it easy—with the new Motion, you'll be optimally equipped for every situation.

BestSound Technology for better quality of life

Our ears are highly complex structures. Together with our sense of hearing, they recognize the direction from which a sound is coming and allow us to distinguish speech, enjoy music and filter out unimportant noise. The new Motion from Siemens can do all this, too—and do it completely automatically. It learns the behavior of the wearer and retrieves his or her personal settings depending on the situation. Whenever it detects speech, it adjusts to the best possible intelligibility, when it hears music, it switches to the best sound or it suppresses background noise to a comfortable level. No other hearing instrument available today can learn as much as those from Siemens.

Hear what goes on behind you and next to you

For many years it has been standard for hearing instruments to be able to “hear” the direction from which a sound is coming. Until now, however, they've been designed so that people were best heard if they stood directly opposite the person wearing the hearing instrument. This is not the case with Motion. It automatically ensures the best speech intelligibility from any direction. It doesn't matter if the wearer is talking to someone walking beside them or the wearer's grandchildren are calling out from the back seat of the car.

Greater comfort and individuality

With the new Motion the only thing you have to worry about is choosing the color. The housing comes in twelve colors including hair colors and skin tones, white, black and granite, as well as three elegant color combinations, meaning wearers really are spoiled for choice. The housing can also be easily replaced by an acoustician, so you don't have to stick to one style. After all, tastes change. You won't have to worry about replacing the batteries either. Motion is fitted with rechargeable batteries, which can be recharged on our new charger overnight. The charger also dries out the hearing instrument. This extends the life of the hearing instrument and therefore the pleasure it provides.

Motion™ S in the new color combination, Alaska.

Hearing more means experiencing more

International studies in industrial countries have shown that around ten percent of the population actually need a hearing instrument but aren't currently wearing one. And this number will continue to rise, with both our aging society and the continuously increasing levels of environmental noise, particularly for young people, exacting their toll. Many people with hearing loss who don't wear a hearing instrument cut themselves off from many aspects of life by not wearing one, eroding their quality of life. With the new Motion from Siemens they can experience their world again. ■
